

PETERBOROUGH & DISTRICT ANGLING ASSOCIATION

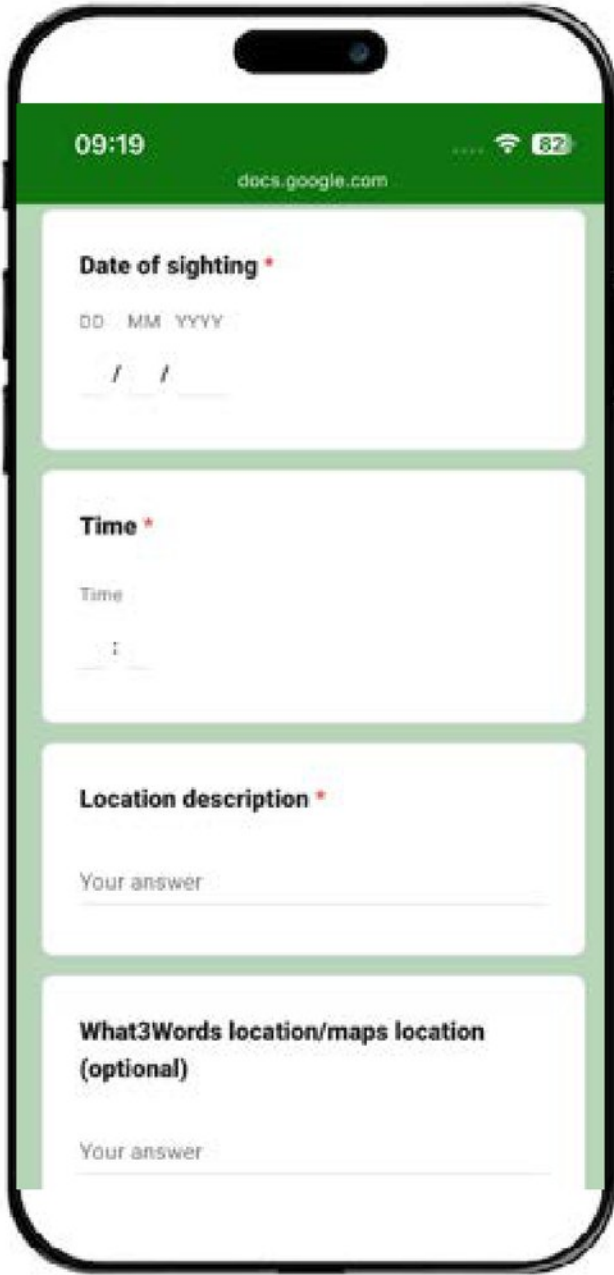

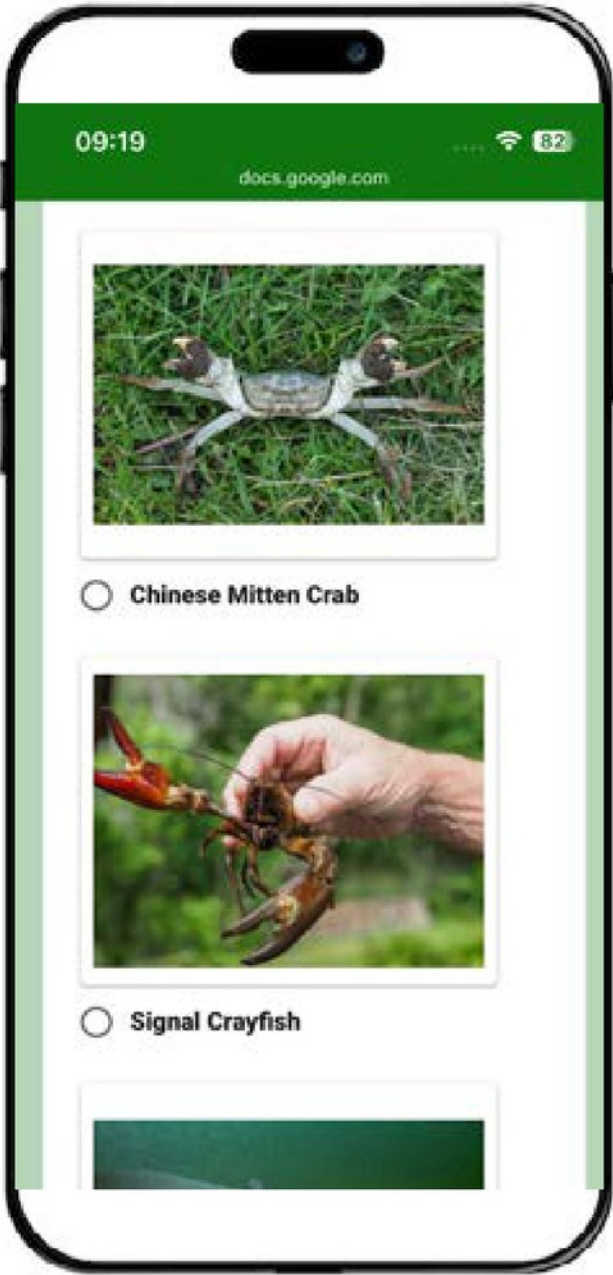

A catchment based, data based strategy to recovery and fishery management

Where the data starts

The launch of our application has allowed our members and a now growing number of members of the public to help monitor our local environment. Currently you can report Chinese mitten crabs, wels catfish, Mink, Cormorants and signal crayfish. The application also allows emergency numbers to be called if any animal is found in distress as well as EA emergency contact info for reporting of environmental crimes such as fishing taking or pollution. Applications such as this are aids to bridge the gap between anglers' passion for the natural environment and public perception.

Cormorant

Mapped P&DAA sightings from bailiff reports

— River Nene ● Cormorant Roost sites ● Individual Cormorant sightings from club members/bailiffs/public using P&DAA Invasive report App (Total counted **557**)

Catchment context

Proposed and agreed areas for shooting. Areas mapped in closer detail. River Nene course.
